

The HaloFogger LS EXT Disinfection System

Harness the power of Hydrogen-Peroxide and take it even further with the HaloFogger LS EXT.

This Extended Nozzle model of our popular Halo Disinfection System allows the HaloFogger to reach into hoods, cabinets and other tight areas, which means it's now easier than ever to find the optimal placement for the nozzle.

The HaloFogger LS EXT means you can have simple, safe, effective disinfection wherever you need it, and at a fraction of the cost of a UV or VHP system. The HaloFogger LS EXT can fog up to 2,500 cubic feet with a 30 minute timer.

All foggers also come equipped with HaloLog integrated data logging capability, which automatically stores a dated record of the duration of each HaloFogger dispensing run and the total lifetime hours a HaloFogger has operated.

FLEXIBLE

Remote/extended spray nozzle allows the fogging unit to be used for specialized applications.

COMPATIBLE

Like the original, the LS EXT & LS FLX use a disinfectant with exceptional material compatibility.

INTUITIVE

The entire HaloFogger System is intuitive and easy to use, so your staff can concentrate on their work.

INNOVATIVE

These models are easy to use while cutting time and meeting EPA standards.

The HaloFogger LS FLX Disinfection System

The HaloFogger LS FLX combines the proven effectiveness and volume capacity of Halosil's standard, industry-proven HaloFogger with the added nozzle flexibility available with the HaloFogger LS EXT, used to treat smaller spaces.

The FLX design includes a tripod assembly on which to mount detachable hoses, providing the fogger extended range for optimal positioning. The HaloFogger LS FLX has a fluid output of 50ml (1.7 oz) per minute and can treat a room up to 9,500 cubic feet.

Position the HaloFogger LS FLX outside of the treatment area while fogging takes place, and eliminate the need to dwell and aerate before moving the FLX to the next area for treatment.

All new foggers come equipped with HaloLog integrated data logging capability, which automatically stores a dated record of the duration of each HaloFogger dispensing run and the total lifetime hours a HaloFogger has operated.

Handling:

The device has wheels on the bottom to make movement easy and safe.

Industries:

Can be used across a wide range of industries

Uses:

Disinfects areas that many systems may neglect, all by EPA standards.
