

INTRODUCING

# THE BULLFOGGER

## DISINFECTANT FOGGER

The BullFogger is specially designed for atomizing and dispersing disinfectants in a variety of applications. Units are sturdy, compact and powerful. The BullFogger is convenient for short-term use, and can be connected to a metering pump for long-term use.

The BullFogger's centrifugal atomization produces billions of tiny, fog-like particles of disinfectant solution. As the fog is dispensed, and travels through the air the pathogens are neutralized.

This mobile fogger features a four position pivoting fogging head and powerful airflow propulsion. The fogging output is factory set at a maximum flow rate of 3.5 GPH, but it can be recalibrated by the operator for a variety of applications, such as humidification.

- **Nozzle-Free Atomization**
- **18 Gallon Tank with Large Lid Access**
- **Suitable for Outdoors**
- **Corrosion Resistant**
- **Arrives Fully Assembled**
- **Part Number: QLI-BULLFOG**
